get_dataset_name_from_string
<i>Extract Dataset Name from String</i>

---

## Description

Extracts the dataset name from a vector of strings, taking all characters before the double underscore ("\_\_").

## Usage

```
get_dataset_name_from_string(vec_names)
```

## Arguments

vec_names	A character vector containing names with the format "dataset__something".
-----------	---

## Value

A character vector of dataset names.
