get_community_data	<i>Get Community Data</i>
--------------------	---------------------------

---

## Description

This function processes a data frame containing community data and extracts the relevant columns, unnesting the 'data\_community' column in the process.

## Usage

```
get_community_data(data = NULL)
```

## Arguments

**data** A data frame. Must contain the columns 'dataset\_name' and 'data\_community'.

## Details

The function performs the following steps:

- Validates that the input is a data frame.
- Ensures the presence of the 'dataset\_name' and 'data\_community' columns.
- Selects the 'dataset\_name' and 'data\_community' columns.
- Unnests the 'data\_community' column.

## Value

A data frame with the 'dataset\_name' and unnested 'data\_community' columns.
