make_hmsc_model	<i>Make HMSC Model</i>
-----------------	------------------------

Description

Create a Hierarchical Modelling of Species Communities (HMSC) model to fit community and abiotic data.

Usage

```
make_hmsc_model(  
  data_to_fit = NULL,  
  sel_formula = NULL,  
  random_structure = NULL,  
  error_family = c("normal", "binomial")  
)
```

Arguments

data_to_fit	A list containing the community and abiotic data to fit the model.
random_structure	A list containing the random structure for the model, including the study design and random levels.
error_family	A character string specifying the error family. Options are "normal" or "binomial" (default: "normal").

Details

If 'error_family' is "binomial", the community data is converted to binary presence/absence data, and the error family is set to "probit".

Value

returns an unfitted HMSC model object.
