make_classification_table
<i>Make Classification Table</i>

Description

Creates a wide-format taxonomic classification table from a list of data frames containing taxon names and ranks (e.g., family, genus, species).

Usage

```
make_classification_table(data)
```

Arguments

data	A list of data frames, each containing columns 'sel_name', 'rank', and 'name'.
------	--------------------------------------------------------------------------------

Details

Filters for relevant taxonomic ranks, removes duplicates, and pivots the table to wide format with one column per rank.

Value

A data frame in wide format with columns for each taxonomic rank and one row per 'sel_name'.
