get_active_config   *Get Active Configuration Value*

Description

Retrieves a specific configuration value from a YAML configuration file.

Usage

```
get_active_config(value = NULL, file = here::here("config.yml"))
```

Arguments

value   A character vector specifying the configuration key(s) to retrieve.

file   Path to the YAML configuration file (default: "config.yml").

Details

Validates input parameters, ensures the file is readable, and retrieves configuration value(s) using 'config::get'. Active configuration is set by the 'R_CONFIG_ACTIVE' environment variable.

Value

Value(s) associated with the specified key(s) in the configuration file.
