get_taxa_classification

Get Taxa Classification

Description

Retrieves taxonomic classification for a vector of taxa using the taxospace package. Filters results to include only plant taxa.

Usage

```
get_taxa_classification(data)
```

Arguments

data   A character vector of taxon names to classify.

Details

Uses taxospace::get_classification to retrieve classification. Flags and filters for plant taxa (kingdom Plantae). Returns an empty tibble if no plant taxa found.

Value

A data frame with columns for selected name, taxonomic name, rank, and id.
