check_target_succeeded

Check Whether a Targets Target Succeeded

Description

Checks targets metadata for one target name and returns 'TRUE' when the target is present and has no recorded error.

Usage

```
check_target_succeeded(data_meta, target_name)
```

Arguments

data_meta	A targets metadata data frame with columns 'name' and 'error', or 'NULL'. 'NULL' is treated as no successful target.
target_name	A single non-empty character string identifying the target to check.

Value

A single logical value.

Examples

```
data_meta <- tibble::tibble(  
  name = "model_evaluation_genus",  
  error = NA_character_  
)  
check_target_succeeded(data_meta, "model_evaluation_genus")
```
