flatten_design_tokens *Flatten design configuration into a token list*

Description

Recursively flattens all top-level design token sections except ‘metadata’ into CSS/SCSS token key-value pairs.

Usage

```
flatten_design_tokens(design)
```

Arguments

design Named list as returned by ‘load_design_config()’.

Value

A flat named list of scalar token values.

Examples

```
## Not run:  
flatten_design_tokens(load_design_config())  
  
## End(Not run)
```
