get_functional_type_classification_path
<i>Get Functional-Type Classification Path</i>

Description

Finds the latest dated functional-type classification ‘.qs’ file path for one continent and optional source prefix.

Usage

```
get_functional_type_classification_path(  
  continent_id,  
  data_source_prefix = NULL,  
  path_processed = here::here("Data/Processed/Traits")  
)
```

Arguments

continent_id	A single non-empty character string identifying the continent.
data_source_prefix	Optional single non-empty character string identifying a source-specific FT classification family, such as “modern”. Use ‘NULL’ for historical paleo/global classification files.
path_processed	A single character string giving the directory that contains the FT classification ‘.qs’ files. Defaults to ‘here::here("Data/Processed/Traits")’.

Value

A single character string with the full path to the latest matching ‘.qs’ file.
