Contents

load_design_config 1

Index 2

load_design_config	<i>Load design configuration from JSON</i>
--------------------	--

Description

Reads a 'design_config.json' file and returns a named list containing the parsed configuration, resolved file path, and parent directory.

Usage

```
load_design_config(path = "design_config.json")
```

Arguments

path	Character scalar. Path to the JSON file.
------	--

Value

A named list with 'config', 'config_path', and 'config_dir'.

Examples

```
## Not run:  
design <- load_design_config()  
  
## End(Not run)
```
