save_temporal_trajectory_animation	
<i>Save Temporal Trajectory Animation</i>	

Description

Renders and saves one per-continent temporal ANOVA component trajectory animation as a GIF file, writing individual PNG frames and then combining them with [build_gif_from_frames()].

Usage

```
save_temporal_trajectory_animation(  
  continent_label,  
  data_temporal_components,  
  data_temporal_modularity,  
  output_file_name,  
  frame_directory_name,  
  path_output,  
  vec_component_colours,  
  colour_modularity,  
  vec_palette = NULL,  
  font_family = "VT323"  
)
```

Arguments

continent_label
Character scalar. Continent name used as the frame title.

data_temporal_components
Tibble with columns 'age', 'component', and 'component_percentage'. Should be pre-filtered to the target continent.

<code>data_temporal_modularity</code>	Tibble with columns 'age' and 'modularity_q'. Should be pre-filtered to the target continent.
<code>output_file_name</code>	Character scalar. Output GIF file name (relative to 'path_output').
<code>frame_directory_name</code>	Character scalar. Name of the sub-directory to write PNG frames into.
<code>path_output</code>	Character scalar. Path to the output directory.
<code>vec_component_colours</code>	Named character vector mapping component names to fill colours.
<code>colour_modularity</code>	Character scalar. Colour for the modularity Q overlay line.
<code>vec_palette</code>	Optional named character vector of ORACLE colours. If 'NULL', colours are read with 'get_oracle_palette_values()'.
<code>font_family</code>	Character scalar. Font family for all text elements.

Value

List returned by `[build_gif_from_frames()]` with 'animation_path' and 'used_magick' entries.
