build_decomposition_environment_formula
<i>Make Decomposition Environmental Formula</i>

Description

Creates environmental formulas for decomposition diagnostics with explicit control over how ‘age’ enters the model.

Usage

```
build_decomposition_environment_formula(  
  data = NULL,  
  age_formula_mode = base::c("none", "main_effect", "interaction")  
)
```

Arguments

- data Data frame of scaled abiotic predictors.
- age_formula_mode Single character string. One of “none”, “main_effect”, or “interaction”.

Value

Formula object suitable for ‘fit_jsdm_model()’.
