`.build_empty_decomposition_variant`
Build an Empty Decomposition Variant Result

Description

Internal helper that constructs the stable failed-variant result schema.

Usage

```
.build_empty_decomposition_variant(  
  route_id,  
  repeat_id,  
  fold_id,  
  variant,  
  status,  
  error_message,  
  warning_text = NA_character_,  
  diagnostics = NULL  
)
```

Arguments

<code>route_id</code>	Diagnostic route identifier.
<code>repeat_id</code>	Repeated-fold identifier.
<code>fold_id</code>	Fold identifier.
<code>variant</code>	Model variant identifier.
<code>status</code>	Failure status.
<code>error_message</code>	Captured error message.
<code>warning_text</code>	Collapsed warning text.
<code>diagnostics</code>	Optional one-row fold diagnostics.

2

.build_empty_decomposition_variant

Value

One-row failed-variant tibble.
