filter_complete_trait_records
<i>Filter Complete Trait Records</i>

Description

Selects the required columns from a raw trait data frame and removes rows where ‘taxon_id’ or ‘trait_value’ is ‘NA’.

Usage

```
filter_complete_trait_records(data_trait_records_raw)
```

Arguments

`data_trait_records_raw`
A data frame returned by [load_trait_records_from_vegvault()]. Expected to contain at least the columns ‘taxon_id’, ‘trait_domain_name’, ‘trait_name’, and ‘trait_value’.

Details

Uses [dplyr::any_of()] for column selection so the function tolerates input data frames that already lack one of the optional columns without error.

Value

A tibble with columns ‘taxon_id’, ‘trait_domain_name’, ‘trait_name’, and ‘trait_value’, with all rows where ‘taxon_id’ or ‘trait_value’ is ‘NA’ removed.
