prepare_binary_prediction_metric_input
<i>Prepare Binary Prediction Metric Input</i>

Description

Validates aligned binary observations and predicted probabilities and computes counts shared by predictive metric evaluators.

Usage

```
prepare_binary_prediction_metric_input(  
  observed = NULL,  
  predicted_probability = NULL  
)
```

Arguments

observed	Numeric vector containing only zero and one.
predicted_probability	Numeric vector of predicted probabilities in the closed interval <code>'[0, 1]'</code> , aligned one-to-one with <code>'observed'</code> .

Value

Named list containing validated observation and probability vectors, observation counts, prevalence, and `'class_status'`. The status is `"ok"`, `"undefined_no_presences"`, or `"undefined_no_absences"`.

Examples

```
prepare_binary_prediction_metric_input(  
  observed = c(0, 1),  
  predicted_probability = c(0.2, 0.8)  
)
```
