Aggregate sjSDM Tuning Fit Attempts

Description

Extracts and combines candidate attempt provenance from the compact tuning prediction cache.

Usage

```
aggregate_sjsdm_tuning_fit_attempts(list_prediction_cache = NULL)
```

Arguments

`list_prediction_cache`	Fold-organized prediction cache from [aggregate_sjsdm_tuning_work_items()].

Value

Attempt-level tibble ordered by repeat, fold, candidate, and attempt.

Examples

```
aggregate_sjsdm_tuning_fit_attempts(base::list())
```
