# Allocate Shapley Variance Components

## Description

Allocates unique variance fractions directly and divides shared fractions equally among their contributing abiotic, association, and spatial components.

## Usage

```
allocate_shapley_variance_components(data_slice, group_keys)
```

## Arguments

| | |
|---|---|
| `data_slice` | One grouped variance-fraction data frame. |
| `group_keys` | Group keys supplied by [dplyr::group_modify()]. The values are accepted to preserve the group-modification function contract. |

## Value

A three-row tibble containing the allocated variance for each component.
