Make Decomposition Environmental Formula

Description

Creates environmental formulas for decomposition diagnostics with explicit control over how 'age' enters the model.

Usage

```
build_decomposition_environment_formula(
  data = NULL,
  age_formula_mode = base::c("none", "main_effect", "interaction")
)
```

Arguments

`data`	Data frame of scaled abiotic predictors.
`age_formula_mode`	Single character string. One of '"none"', '"main_effect"', or '"interaction"'.

Value

Formula object suitable for 'fit_jsdm_model()'.
