Build an Empty Decomposition Variant Result

Description

Internal helper that constructs the stable failed-variant result schema.

Usage

```
.build_empty_decomposition_variant(
  route_id,
  repeat_id,
  fold_id,
  variant,
  status,
  error_message,
  warning_text = NA_character_,
  diagnostics = NULL
)
```

Arguments

`route_id`	Diagnostic route identifier.
`repeat_id`	Repeated-fold identifier.
`fold_id`	Fold identifier.
`variant`	Model variant identifier.
`status`	Failure status.
`error_message`	Captured error message.
`warning_text`	Collapsed warning text.

`diagnostics` Optional one-row fold diagnostics.

Value

One-row failed-variant tibble.
