Build an sjSDM Artifact Envelope

Description

Builds and validates one native cross-validation v2 artifact.

Usage

```
build_sjsdm_artifact_envelope(
  artifact_type = NULL,
  payload = NULL,
  provenance = NULL
)
```

Arguments

`artifact_type`	Registered non-empty character scalar artifact type.
`payload`	Named list with the exact payload names registered for the artifact type.
`provenance`	One-row data frame with common and artifact-specific provenance.

Value

Validated named v2 artifact list with deterministic content hash.

Examples

```
build_sjsdm_artifact_envelope(
  artifact_type = "sjsdm_cv_predictions",
  payload = list(
    data_predictions = tibble::tibble(),
    data_fold_diagnostics = tibble::tibble()
  ),
  provenance = tibble::tibble(
    created_at = as.POSIXct("2026-08-11", tz = "UTC"),
```

```
    pipeline_id = "pipeline_paleo_core",
    configuration_profile = "project_cz_paleo",
    source_schema_version = "2.0.0",
    migration_applied = FALSE,
    migration_function = NA_character_
  )
)
```
