Build sjSDM Tuning Work Items

Description

Builds deterministic repeat, fold, and candidate work items for granular cross-validation execution and restart.

Usage

```
build_sjsdm_tuning_work_items(
  data_assignments = NULL,
  data_candidates = NULL,
  seed = 900723L
)
```

Arguments

`data_assignments`	Cross-validation assignments accepted by [run_sjsdm_tuning_candidates()].
`data_candidates`	Candidate table returned by [build_sjsdm_regularization_candidates()].
`seed`	Non-negative base integer used by the tuning engine.

Value

Tibble with one row per repeat, fold, and candidate. 'work_item_id' is a deterministic digest of the fold membership, candidate parameters, and base seed.
