Build an sjSDM Unit Fitting Plan

Description

Validates preparation evidence for one analysis tier and classifies each requested unit as eligible for fitting or expected infeasible.

Usage

```
build_sjsdm_unit_fitting_plan(
  data_preparation_inventory = NULL,
  analysis_id = NULL,
  tier_id = NULL,
  scale_ids = NULL,
  resolution_ids = NULL
)
```

Arguments

`data_preparation_inventory`	Data frame containing preparation evidence by analysis, tier, unit, and resolution.
`analysis_id`	Character scalar identifying the analysis.
`tier_id`	Character scalar identifying the spatial tier.
`scale_ids`	Unique character vector of requested unit identifiers.
`resolution_ids`	Unique character vector of required resolutions.

Value

Tibble with one row per requested unit and columns 'scale_id', 'fitting_status', and 'preparation_reason_code'.
