Build Interim Trait Analysis Release

Description

Freezes corrected VegVault 1.0.0 records behind an explicit six-domain analysis contract and records domain-level evidence status.

Usage

```
build_trait_analysis_release(
  data_trait_records,
  vegvault_version,
  release_id,
  release_date
)
```

Arguments

`data_trait_records`	Corrected classified trait records.
`vegvault_version`	Character scalar VegVault version.
`release_id`	Character scalar stable interim release identifier.
`release_date`	Character scalar release date in ISO format.

Details

Leaf mass per area and leaf nitrogen content per unit mass remain available in the primary six-trait analysis but are marked as provisional because their original source units have not been fully reconstructed. A different VegVault version fails closed so a future corrected release must explicitly replace this compatibility contract.

Value

A list containing unchanged data_trait_records and a data_trait_domain_status tibble.

Examples

```
## Not run:
build_trait_analysis_release(
  data_trait_records = data_traits_classified_corrected,
  vegvault_version = "1.0.0",
  release_id = "vegvault_1_0_0_interim_2026_08_31",
  release_date = "2026-08-31"
)

## End(Not run)
```
