Build Trait Review Policy Outputs

Description

Builds proposed decisions, a bounded agent-review queue, and policy summaries from all-domain trait-review recommendations without approving decisions.

Usage

```
build_trait_review_policy_outputs(
  data_candidate_recommendations,
  evidence_reference,
  max_agent_candidates_per_domain = 25L,
  agent_batch_size = 25L
)
```

Arguments

`data_candidate_recommendations`	Candidate recommendations returned by [diagnose_trait_review_candidates()].
`evidence_reference`	Non-empty reference to the policy report supporting the proposals.
`max_agent_candidates_per_domain`	Maximum number of targeted agent-review candidates retained per domain.
`agent_batch_size`	Maximum number of candidates assigned to one agent batch.

Value

A named list containing 'data_policy_proposals', 'data_agent_review_queue', and 'data_policy_summary'.

Examples

```
recommendations <- tibble::tibble(
  candidate_id = digest::digest(
    "raw|Taxon A|Diaspore mass",
```

```
    algo = "sha256",
    serialize = FALSE
  ),
  taxon_name = "Taxon A",
  trait_domain_name = "Diaspore mass",
  n_records_current = 1L,
  deterministic_outcome = "retain_flagged_uncertain",
  suggested_action = "none",
  acceptance_eligibility = "eligible_policy_acceptance",
  recommendation_rationale = "No objective error evidence.",
  candidate_impact_score = 0.5
)
build_trait_review_policy_outputs(
  recommendations,
  evidence_reference = "report.html"
)
```
