Reconcile Programmatic Trait Review Candidates

Description

Applies conservative deterministic checks to pending trait-review candidates. It proposes rules only for obsolete candidates, independently corroborated dataset factors, or threshold rules that improve current within-candidate agreement. Other candidates remain pending or are routed to targeted agent review.

Usage

```
build_trait_review_programmatic_reconciliation(
  data_candidate_triage,
  data_source_pairs,
  data_submission_audit,
  data_record_evidence,
  evidence_reference
)
```

Arguments

`data_candidate_triage`	Candidate triage from [build_trait_review_programmatic_triage()].
`data_source_pairs`	Candidate source-pair evidence from the programmatic triage.
`data_submission_audit`	Derived review-submission audit containing the archived instructions.
`data_record_evidence`	Current record evidence from [build_trait_review_evidence_packets()].
`evidence_reference`	Non-empty path to the human-readable reconciliation report.

Value

A named list containing one reconciliation row per pending candidate, unapproved decision proposals, and an outcome summary.
