Combine Selected sjSDM Fold Artifacts

Description

Combines, deterministically orders, and validates complete out-of-fold coverage across selected-candidate fold results.

Usage

```
combine_sjsdm_selected_fold_artifacts(
  list_fold_results = NULL,
  data_assignments = NULL,
  taxon_names = NULL
)
```

Arguments

`list_fold_results`	List of fold results from [run_sjsdm_selected_fold()] or the cached builder.
`data_assignments`	Location-level fold assignment table used to derive expected coverage.
`taxon_names`	Full ordered response-taxon names.

Value

Named list with combined predictions and fold diagnostics.
