Compute Decomposition Prediction Metrics

Description

Computes held-out binary prediction metrics for diagnostic models.

Usage

```
compute_decomposition_prediction_metrics(
  data_observed = NULL,
  data_predicted = NULL
)
```

Arguments

`data_observed`	Observed test response matrix.
`data_predicted`	Predicted probability matrix aligned to 'data_observed'.

Value

One-row tibble with log-loss, Brier, pooled AUC, and macro-AUC.
