Compute Pollen Proportions

Description

Computes row-level pollen proportions from supplied sample totals.

Usage

```
compute_pollen_proportions(data_community = NULL, data_pollen_sums = NULL)
```

Arguments

`data_community`	A data frame containing 'sample_name' and 'pollen_count' columns.
`data_pollen_sums`	A data frame containing 'sample_name' and 'pollen_sum' columns.

Details

Joins the input data with total pollen counts and stores the calculated proportion in 'value'.

Value

A data frame with pollen proportions, excluding 'pollen_sum' and 'pollen_count' columns.
