Diagnose R Architecture

Description

Converts current raw architecture findings into the maintained findings contract after applying explicit repository exceptions.

Usage

```
diagnose_r_architecture(data_findings, data_exceptions)
```

Arguments

`data_findings`	Data frame of current raw architecture findings.
`data_exceptions`	Data frame using the maintained exception-ledger schema.

Value

A data frame using the maintained architecture-findings schema.

Examples

```
diagnose_r_architecture(
  data_findings = tibble::tibble(
    finding_type = character(),
    current_path = character(),
    symbol = character(),
    owning_issue = character(),
    message = character()
  ),
  data_exceptions = tibble::tibble(
    exception_id = character(),
    finding_type = character(),
    current_path = character(),
    symbol = character(),
```

```
    owner_issue = character(),
    rationale = character(),
    expiry_issue = character()
  )
)
```
