Get Dataset Coordinates

Description

Extracts unique coordinates for each dataset, excluding gridpoints.

Usage

```
extract_dataset_coordinates(data)
```

Arguments

`data`	A data frame containing columns 'dataset_name', 'dataset_type', 'coord_long', and 'coord_lat'. Rows with 'dataset_type == "gridpoints"' are excluded.

Value

A data frame with unique coordinates for each dataset, with 'dataset_name' as row names.
