Extract a Model Tuning Integer

Description

Extracts one integer value from a one-row model tuning table.

Usage

```
extract_model_tuning_integer(
  data_tuning_row,
  column_name,
  scale_id,
  required = TRUE
)
```

Arguments

`data_tuning_row`	One-row data frame containing model tuning values.
`column_name`	Single character string naming the value to extract.
`scale_id`	Single character string used in validation messages.
`required`	Logical indicating whether a missing value should raise an error.

Value

A single integer, or 'NULL' for an optional missing value.
