# Test Cached Modern Community Mapping Against Current Inputs

## Description

Reconstructs the known pure modern-resolution mapping in memory and requires exact equality, without rewriting cached preprocessing or fitting models.

## Usage

```
is_sjsdm_cv_preparation_mapping_current(
  store_path,
  target_name,
  command,
  read_target_function = targets::tar_read_raw,
  mapping_function = NULL
)
```

## Arguments

| | |
|---|---|
| `store_path`, `target_name`, `command` | Existing store, mapping endpoint and its current manifest command. |
| `read_target_function` | Injectable cached target reader. |
| `mapping_function` | Optional test mapping function. Production loads the tracked inline mapper. |

## Value

A logical scalar. Unknown commands and reconstruction errors fail.

## Examples

```
## Not run:
is_sjsdm_cv_preparation_mapping_current(store, target, manifest_command)

## End(Not run)
```
