Load Spatial Model Results

Description

Loads successful spatial model ANOVA and evaluation targets from indexed targets stores and returns one summary row per store-resolution-component combination. Cached model results behind failed shared or resolution-specific upstream targets are excluded, even when their ANOVA targets remain readable.

Usage

```
load_spatial_model_results(
  store_index,
  resolution_ids,
  read_target_fn = targets::tar_read_raw,
  meta_fn = targets::tar_meta,
  require_non_empty = FALSE
)
```

Arguments

`store_index`	Data frame returned by [build_spatial_model_store_index()].
`resolution_ids`	Character vector of model resolution identifiers.
`read_target_fn`	Function used to load one target. Defaults to [targets::tar_read_raw()].
`meta_fn`	Function used to load target metadata. Defaults to [targets::tar_meta()].
`require_non_empty`	Logical. If 'TRUE', error when no rows are loaded.

Value

A tibble with Shapley and predictor-inclusive ANOVA component values, explicitly labelled fitted AUC, and cross-validated predictive Tjur R2, AUC, and log loss.
