Look Up a JSDM Variance Component

Description

Returns the first clamped variance value for a named component, or zero when the component is absent.

Usage

```
.lookup_jsdm_variance_component(data_slice, component_name)
```

Arguments

`data_slice`	Data frame containing 'component' and 'R2_clamped' columns.
`component_name`	Character scalar naming the requested component.

Value

Numeric scalar containing the first matching value or zero.
