Predict sjSDM Probability Matrix

Description

Predicts held-out probabilities from a fitted sjSDM object using fold-local test inputs.

Usage

```
predict_sjsdm_probability_matrix(
  object = NULL,
  data_test_input = NULL,
  predict_function = stats::predict
)
```

Arguments

`object`	Fitted sjSDM-like model object.
`data_test_input`	Fold-local test input containing 'data_abiotic_to_fit' and optionally 'data_spatial_to_fit'.
`predict_function`	Injectable prediction function. Defaults to [stats::predict()].

Value

Numeric matrix of probabilities aligned to the test input rows.
