Prepare Scientific Fold Content for Calibration Hashing

Description

Excludes operational runtime and memory measurements from signatures. Fold assignments, observations, predictors and spatial strategy provenance remain unchanged. This does not alter the folds used for fitting.

Usage

```
prepare_sjsdm_cv_calibration_hash_folds(
  list_prepared_folds,
  contract_version = base::c("v5", "v4")
)
```

Arguments

`list_prepared_folds`	Cached records returned by [prepare_sjsdm_tuning_folds()].
`contract_version`	Signature version. Version four retains memory fields for exact migration proof; the default version five excludes operational memory fields too.

Value

A copy of the fold records without operational runtime fields.

Examples

```
prepare_sjsdm_cv_calibration_hash_folds(list())
```
