Prepare Spatial Association Map Data

Description

Completes paleo spatial synthesis results against the intended spatial grid and preparation inventory so unavailable models are not displayed as zero.

Usage

```
prepare_spatial_association_map_data(
  data_unit,
  data_spatial_grid,
  data_preparation_inventory,
  resolution_ids = base::c("genus", "family", "functional_type")
)
```

Arguments

`data_unit`	Paleo spatial synthesis unit table.
`data_spatial_grid`	Spatial-grid table containing unit bounds.
`data_preparation_inventory`	Stage 02 preparation inventory.
`resolution_ids`	Character vector of resolution identifiers to include.

Value

A tibble with one row per unit and resolution, an association percentage, model counts, and an explicit 'availability_status'.
