Resolve Functional-Type Classification Path

Description

Finds the latest dated functional-type classification '.qs' file path for one continent and optional source prefix.

Usage

```
resolve_functional_type_classification_path(
  continent_id,
  classification_source_prefix = NULL,
  path_classification_directory = here::here("Data/Processed/Traits")
)
```

Arguments

`continent_id`	A single non-empty character string identifying the continent.
`classification_source_prefix`	Optional single non-empty character string identifying a source-specific FT classification family, such as '"modern"'. Use 'NULL' for historical paleo/global classification files.
`path_classification_directory`	A single character string giving the directory that contains the FT classification '.qs' files. Defaults to 'here::here("Data/Processed/Traits")'.

Value

A single character string with the full path to the latest matching '.qs' file.
