Assign Accepted sjSDM CV Budgets to Production Units

Description

Assigns each maximum-complexity representative budget to all spatial units in its analysis-tier-continent-resolution group. Groups without an eligible representative inherit the most conservative accepted budget in the same analysis-tier-resolution stratum. Eligible temporal profiles keep their own accepted budgets; ineligible profiles use the same conservative fallback. Production escalation handles unit exceptions.

Usage

```
resolve_sjsdm_cv_calibration_budgets(
  data_units = NULL,
  data_accepted = NULL,
  cv_n_step_size = NA_real_,
  cv_n_early_stopping = NA_integer_
)
```

Arguments

`data_units`	Complete calibration unit inventory.
`data_accepted`	Accepted representative budgets with unit keys, selection reasons, budget order, iterations, and sampling.
`cv_n_step_size`, `cv_n_early_stopping`	Fixed CV optimizer values to publish; missing values are retained as typed 'NA' for CSV/config serialization.

Value

Unit-keyed production CV budget table.
