Resolve the sjSDM Tier Tuning Context

Description

Applies an optional configured resolution subset to a pipeline's default tier-tuning context.

Usage

```
resolve_sjsdm_tuning_context(
  list_default_context = NULL,
  resolution_ids = NULL
)
```

Arguments

`list_default_context`	Named list describing the pipeline, resolution IDs, and store layout.
`resolution_ids`	Optional non-empty character subset of the default resolution IDs.

Value

The validated tuning context with any configured subset applied.
