Run One sjSDM Tuning Work Item

Description

Fits, predicts, and scores one deterministic candidate/fold work item using a previously prepared fold.

Usage

```
run_sjsdm_tuning_work_item(
  data_work_item = NULL,
  list_prepared_folds = NULL,
  fit_function = NULL,
  predict_function = NULL,
  score_function = score_sjsdm_tuning_predictions,
  epsilon = 1e-06
)
```

Arguments

`data_work_item`	One-row work item from [build_sjsdm_tuning_branch_work_items()]. The optional 'tuning_applicable = FALSE' sentinel returns without fitting.
`list_prepared_folds`	Prepared fold list from [prepare_sjsdm_tuning_folds()].
`fit_function`, `predict_function`, `score_function`	Injectable functions documented by [run_sjsdm_tuning_candidates()].
`epsilon`	Probability clipping tolerance passed to the score function.

Value

Named list containing 'work_item_id', one-row 'data_tuning', and one compact prediction-cache record. Fitted model objects are omitted.
