Save Trait Source Scale Report

Description

Writes a durable Markdown audit and source-domain-taxon count table for interim VegVault source scaling, including the provisional TRY LMA warning.

Usage

```
save_trait_source_scale_report(
  data_trait_records_raw,
  data_trait_records_source_scaled,
  data_trait_source_scale_rule_audit,
  data_trait_source_scale_record_audit,
  data_trait_review_application_audit,
  path_vegvault,
  path_report,
  path_taxon_counts
)
```

Arguments

`data_trait_records_raw`	Untouched extracted trait records.
`data_trait_records_source_scaled`	Records after approved source scaling.
`data_trait_source_scale_rule_audit`	Rule-level audit from [apply_trait_source_scale_rules()].
`data_trait_source_scale_record_audit`	Record-level audit from [apply_trait_source_scale_rules()].
`data_trait_review_application_audit`	Review-layer application audit with 'n_source_satisfied'.
`path_vegvault`	Character scalar path to the VegVault SQLite database.

`path_report`	Output path for the Markdown report.
`path_taxon_counts`	Output path for the source-domain-taxon count CSV.

Value

Character vector containing both written paths.
