Summarise Trait Coverage of Community Taxa

Description

Compares a character vector of taxon names from the community data against the taxa present in a wide-format trait table. Reports the proportion of community taxa covered by trait data and identifies which taxa are missing or extra.

Usage

```
summarise_trait_coverage(community_taxa, data_trait_table, verbose = TRUE)
```

Arguments

`community_taxa`	A character vector of unique taxon names from the community data.
`data_trait_table`	A wide-format trait table as returned by [build_trait_table()], with a 'taxon_name' column.
`verbose`	Logical scalar. If 'TRUE', print the coverage summary.

Details

A summary of coverage statistics is printed to the console via 'cli::cli_inform()'.

Value

A named list with the following elements:

n_community_taxa

: Total number of unique taxa in the community vector.

n_covered_taxa

: Number of community taxa present in the trait table.

coverage_percent

: Coverage as a percentage, rounded to one decimal place.

missing_taxa

: Character vector of community taxa absent from the trait table.

extra_taxa

: Character vector of taxa in the trait table not found in the community.
