# Validate Manuscript Plot Data

## Description

Enforces common figure-data requirements before a manuscript figure is drawn or its auditable plot-data table is written.

## Usage

```
validate_manuscript_plot_data(
  data_plot,
  required_columns,
  numeric_bounds = base::list(),
  allow_empty = FALSE
)
```

## Arguments

| | |
|---|---|
| `data_plot` | Data frame to validate. |
| `required_columns` | Character vector of required column names. |
| `numeric_bounds` | Named list. Each element must be a numeric vector of length two giving inclusive lower and upper bounds for the named column. Infinite bounds are permitted. Missing values are allowed, but non-missing values must be finite and inside the declared bounds. |
| `allow_empty` | Logical scalar. If 'FALSE', zero-row data are rejected. |

## Value

The validated data frame, invisibly.
