Validate R Architecture

Description

Enforces the maintained architecture-findings contract and aborts when any unresolved blocking finding remains.

Usage

```
validate_r_architecture(data_findings)
```

Arguments

`data_findings`	Data frame returned by 'diagnose_r_architecture()'.

Value

The validated findings data frame.

Examples

```
validate_r_architecture(
  data_findings = tibble::tibble(
    finding_id = character(),
    finding_type = character(),
    current_path = character(),
    symbol = character(),
    owner_issue = character(),
    message = character(),
    resolution_status = character(),
    exception_id = character()
  )
)
```
