Validate an sjSDM Artifact Envelope

Description

Validates the common v2 envelope, registered payload names, provenance, and deterministic content hash.

Usage

```
validate_sjsdm_artifact_envelope(
  list_artifact = NULL,
  expected_artifact_type = NULL
)
```

Arguments

`list_artifact`	Named list containing one persisted v2 artifact.
`expected_artifact_type`	Optional character scalar required artifact type.

Value

Invisible 'TRUE'. Invalid artifacts abort.

Examples

```
## Not run:
validate_sjsdm_artifact_envelope(
  list_artifact = list_sjsdm_cv_prediction_artifact,
  expected_artifact_type = "sjsdm_cv_predictions"
)

## End(Not run)
```
