Validate an sjSDM Artifact Payload

Description

Validates the exact registered payload names, container types, and duplicate rows for one v2 artifact type.

Usage

```
validate_sjsdm_artifact_payload(
  artifact_type = NULL,
  payload = NULL,
  list_table_contracts = base::list()
)
```

Arguments

`artifact_type`	Registered artifact type.
`payload`	Named payload list.
`list_table_contracts`	Optional named list of exact table contracts. Each contract may define 'columns', 'types', 'keys', 'statuses', and 'n_rows'.

Value

Invisible 'TRUE'; invalid payloads abort.
