Validate an sjSDM Artifact Table

Description

Applies an exact column, type, key, row-count, and status contract to one table nested anywhere inside a v2 cross-validation artifact.

Usage

```
validate_sjsdm_artifact_table(
  data_value = NULL,
  table_name = NULL,
  columns = NULL,
  types = NULL,
  keys = NULL,
  statuses = base::list(),
  n_rows = NULL
)
```

Arguments

`data_value`	Artifact table.
`table_name`	Human-readable payload field name.
`columns`	Exact ordered column names.
`types`	Exact named base types returned by [base::typeof()].
`keys`	Optional unique key columns.
`statuses`	Optional named list of allowed character values.
`n_rows`	Optional exact row count.

Value

Invisible 'TRUE'; invalid tables abort.
