# Validate the sjSDM GPU Runtime

## Description

Runs strict validation for GPU-only sjSDM workflows using the structured result from 'diagnose_sjsdm_gpu_runtime()'.

## Usage

```
validate_sjsdm_gpu_runtime(verbose = TRUE)
```

## Arguments

| | |
|---|---|
| `verbose` | Logical. If 'TRUE' (default), diagnostics are printed. |

## Details

Unlike 'diagnose_sjsdm_gpu_runtime()', this function aborts when reticulate, torch, a CUDA-enabled torch build, or a visible CUDA device is unavailable.

## Value

The successful named GPU-runtime diagnostic list.
