.resolve_decomposition_fold_loss
<i>Resolve One Decomposition Fold Loss</i>

Description

Internal helper that returns a loss only when one variant row matches.

Usage

```
.resolve_decomposition_fold_loss(data_fold, variant_name)
```

Arguments

data_fold	One route-repeat-fold data frame.
variant_name	Variant identifier to look up.

Value

One numeric loss or 'NA_real_' when the match is not unique.
